

## SPiRiT FoIP Software Terminal

SPiRiT FoIP Software Terminal enables users to send and receive fax messages over Internet in real time. Thanks to this SPiRiT solution there is no more need to store and forward data –now you can view the incoming fax message on your PC monitor as soon as “Send” button is pressed on a remote fax machine. You can easily create link between fax machine and your PC, simplifying communication functions.

SPiRiT FoIP Software Terminal fully meets the ITU-T recommendations (directly or indirectly supported): T.38 (Terminating T.38 for Internet Aware Faxes), T.30, T.4, T.6, and supports all major features and options. It is available as an MS Windows DLL library and as ANSI C source code.

By using FoIP technology – the core of FoIP Software Terminal – it's possible to optimize fax data transmission. Delivering fax messages over the Internet is much more cost-saving than using conventional long-distance phone lines.

## Features

- Anti-collision and anti-jitter logic. Handles delays up to 4 sec with anti-collision logic and up to 2 sec without anti-collision logic
- Easily configurable
- Fits UDP mode
- ECM (Error Correction Mode) support
- Capability to send and receive faxes in real time via Internet
- Compatible with the most standard T.38 gateways
- No need for extra facsimile hardware

## Benefits

- Allows to deliver fax messages over Internet and to reduce long-distance charges
- Helps to optimize fax and data transmission

## Key Features

- ITU-T recommendations compliant
- Easily configurable
- Compatible with the most standard T.38 gateways

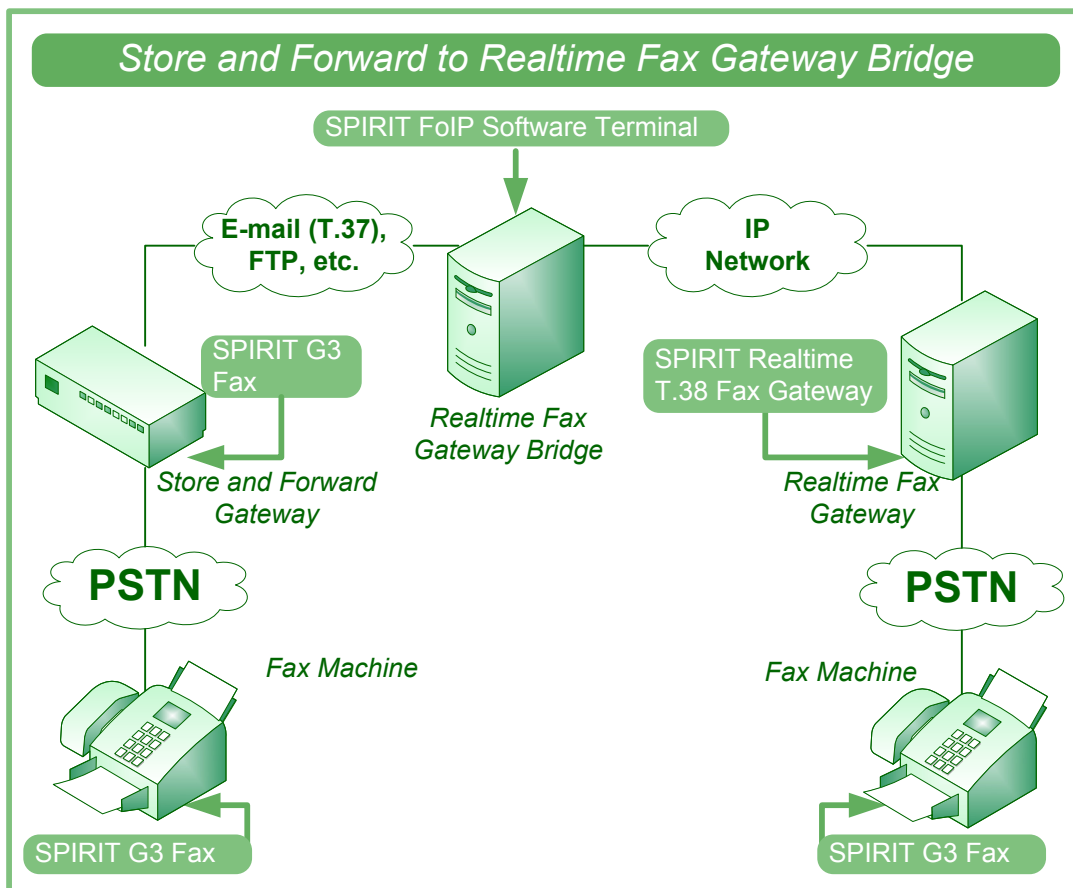

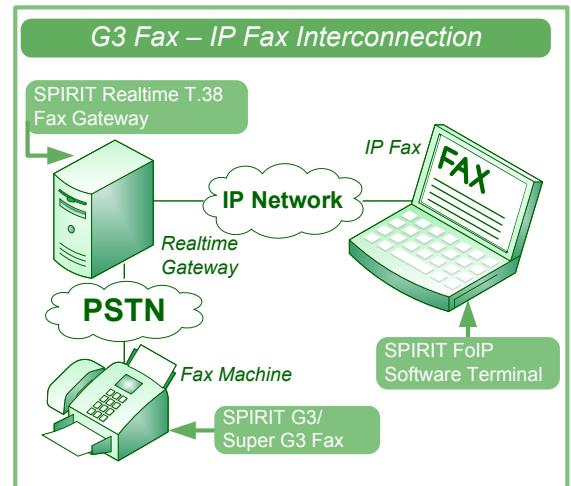

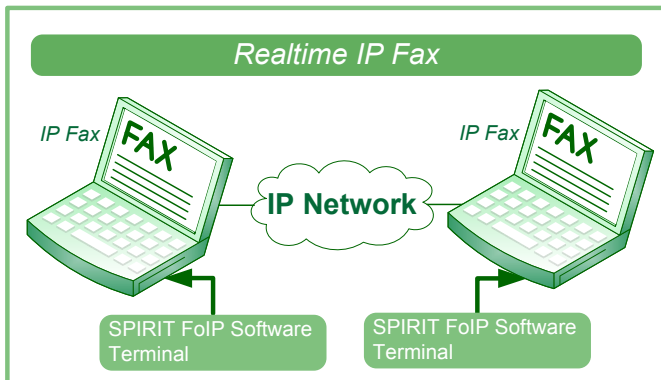

## Applications

- Realtime IP fax
- Store and forward and realtime fax gateways

## Availability

- TI C54x
- TI C55x
- TI C64x
- MS Windows
